PROFILE

Software engineer and co-founder with hands-on experience building and shipping production systems across fullstack web, AI/ML integration, and document automation. Co-founded ML&L Solutions, a software and web development and hosting startup serving paying clients. Experienced across three backend stacks (Node.js, Spring Boot, Google Apps Script), three databases (PostgreSQL, MySQL, MongoDB), and two frontend frameworks (React, Angular). Currently completing an Honours degree in Computer Science with a focus on Software Engineering and AI.

EXPERIENCE

Co-founder & Software Developer ML&L Solutions Inc

2025 – Present

Live business · paying clients

- Co-founded a software and web hosting startup that builds and maintains websites for clients on a monthly retainer model.
- Built a contract automation system that generates personalised PDF contracts from a Google Docs template, captures digital signatures via an HTML5 Canvas pad, and automatically delivers signed documents to both school and parent via email — eliminating manual paperwork for tutoring academies.
- Architected Lift LMS, a learning management system for tutoring schools and academies, leading system design from backend structure and database schema through to RESTful API and MVC architecture implementation.
- Manage cloud file storage across Google Drive with structured folders for contract templates, generated PDFs, and signature assets; all submissions logged to Google Sheets as a structured data layer.

Stack: Node.js, Express.js, PostgreSQL, React, JWT, REST APIs, Google Apps Script, Google Docs API, Gmail API, Drive API, Google Sheets, HTML5 Canvas, Git

Student Assistant (Developer) SMU Department of ICT, Business Application Management 2026

Part-time

- Support development and maintenance of university-facing applications used by staff and students daily.
- Contribute to internal software projects, debugging and resolving system and student-reported issues.
- Collaborate within a structured development team using enterprise tools and Oracle DB-backed systems.

Stack: Power platform, React, HTML, CSS, JavaScript, Oracle DB

PROJECTS

CyberIntel — Cybersecurity Incident Management Platform - Honours project

2026

- Designed and built a full-stack platform for security analysts to record, track, and analyse cybersecurity incidents, with role-based access control for ADMIN and ANALYST roles.
- Integrated a PyTorch-powered AI model that analyses historical incident data and generates predictive analytics on the likelihood of future incident outcomes by type, served via a Flask microservice.
- Implemented JWT-based authentication, full CRUD operations, and a real-time statistics dashboard with Chart.js visualisations of threat prediction data.

- Built with Angular 19 frontend, Spring Boot 4 backend, and MySQL with Hibernate ORM — demonstrating enterprise-grade Java backend development alongside modern frontend and ML integration.

Stack: Angular 19, Spring Boot 4 (Java), MySQL, Hibernate/JPA, PyTorch, Flask (Python), JWT, Tailwind CSS, Chart.js

GlideConnex — Student Transport Management System BSc final year project 2025

- Designed and developed a transport coordination system for managing student travel between residences and campus, featuring a time-slot booking engine with overbooking prevention logic.
- Built RESTful APIs with Node.js and Express to manage bookings, user profiles, and scheduling; integrated MongoDB for data persistence with custom schema design for users, bookings, and time slots.
- Implemented secure JWT authentication and created a dashboard visualising booking trends per time slot to support data-driven scheduling decisions.

Stack: Node.js, Express.js, MongoDB, JWT, REST APIs, JavaScript, HTML, CSS

EDUCATION

BSc Honours — Computer Science & Information Technology

In progress · 2026

Sefako Makgatho Health Sciences University

Completed

BSc — Mathematical Science (Computer Science & Statistics)

Sefako Makgatho Health Sciences University

SKILLS

Languages: C++, PHP, Java, JavaScript, , Python, SQL, PL/SQL

Backend: Node.js, Express.js, Spring Boot, Flask, Google Apps Script, REST APIs, JWT

Frontend: React, HTML, CSS, Tailwind CSS,

Databases: PostgreSQL, MySQL, MongoDB, Oracle DB, Google Sheets

AI / ML: PyTorch, Flask microservices, predictive analytics, model integration

Tools & concepts: Git, GitHub, Firebase, system design, Google Workspace APIs
